* If the $\text{rank}(A) = n$, let \mathbf{b}_i be the i th column of A and \mathbf{b}_0 is column \mathbf{b} .

highest frequency for each, but no more than 10% of the sample.

* If the difference between the two values is less than 10% the difference is not statistically significant.

The "highest number previously found" (total or independent) is the highest number found in the a_{ij} (with i in column i).

[illegible]
